**I**n order to make sound decisions concerning the future of Iowa lakes, it is important to understand how they are used, as well as which factors influence your selection of lakes to visit. The answers you give to the questions in this survey are very important. Even if you have not visited any lakes in Iowa, please complete and return the questionnaire. It is critical for our research to understand the characteristics and views of both those who use and those who do not use Iowa's lakes.

**I**n this first section of the survey, we would like to find out which of the lakes on the enclosed map you or any members of your household visited and what you did there.

1. Have you or any member of your household visited any lakes in Iowa this year?
- Yes       No

If you checked “No” to question 1 skip to question 8 on page 12.

2. We are very interested in your and your household’s usage of Iowa’s lakes—the activities you undertake while visiting them, and your perception of the water quality.

**Water Quality Ladder**

Best possible water quality

10 —  Safe to drink

9 —  Safe to drink

8 —  Safe for swimming

7 —  Safe for swimming

6 —  Game fish like bass can live in it

5 —  Game fish like bass can live in it

4 —  Game fish like bass can live in it

3 —  Okay for boating

2 —  Okay for boating

1 —  Dangerously polluted

0 —  Dangerously polluted

Worst possible water quality

On the table of lakes listed on pages 4–10 we ask you to do the following:

- Record the number of single day and overnight visits you made since January 1, 2014 or plan to make before December 31, 2014.
- Place a checkmark in each of the appropriate boxes to indicate the activities you undertook or plan to undertake in 2014.
- For any lake with which you are familiar, please rate the water quality by assigning a number between 0 and 10 based on the water quality ladder pictured. Familiar lakes include both those that you have visited this year as well as those you have visited in the recent past.

### Reading the Water Quality Ladder

The Water Quality Ladder runs from 0 to 10. The lowest level, 0, is so polluted that it has raw sewage, animal waste, toxic algae, and/or other things in it like trash; it has almost no plant or animal life, smells bad, and contact with it is dangerous to human health.

In contrast, water quality that is a 2 or 3 (“boatable”) would not harm you if you happened to fall into it for a short time while boating or sailing. Water quality that rates a 4, 5, or 6 (“fishable”) is a higher level of quality than “boatable.” Although some kinds of fish can live in boatable water, it is only when water is “fishable” that game fish like bass can live in it. Finally, a rating of 7 or 8 (“swimmable”) is water of a high enough quality that it is safe to swim in and ingest in small amounts.

**This information is very important.**  
Please record the **NUMBER** of times  
you have visited or plan to visit a lake.
